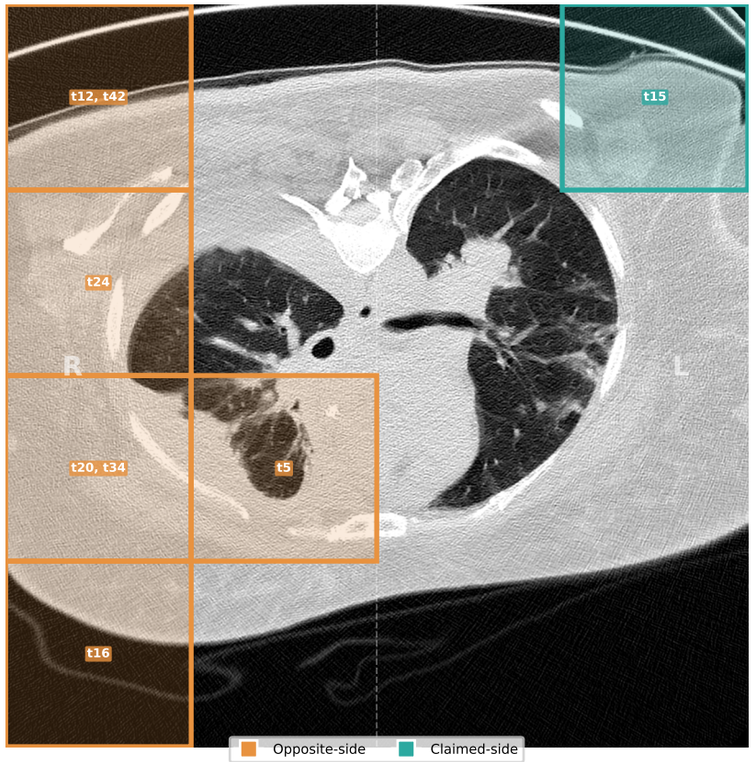
Closed-loop audit trace for repairing an unsupported laterality claim

Stage 4: Verify

spatial evidence check



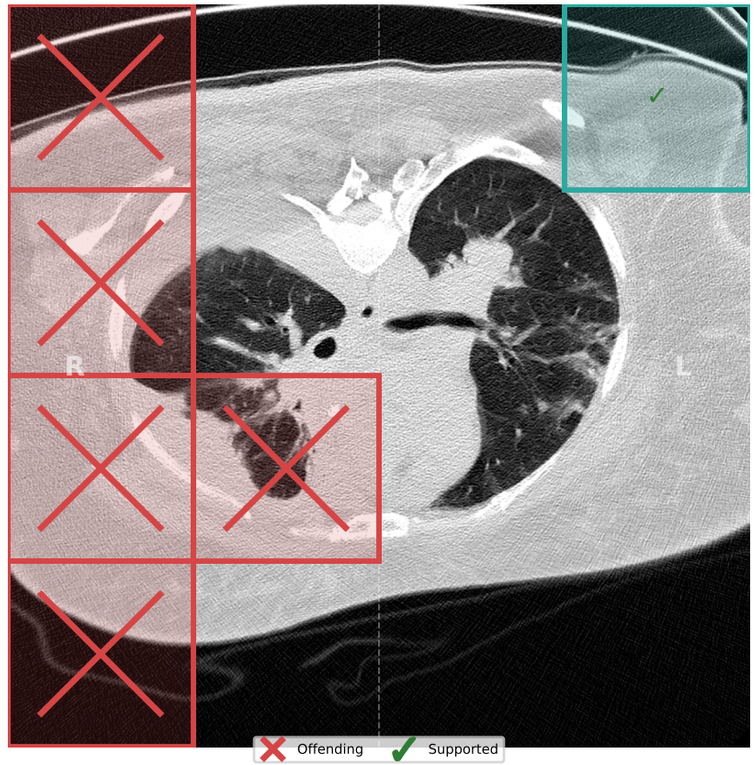
```
"The left lung superior and lingular
segments show areas of increased density
with indistinct borders, in the appearance
of a tree with buds in places, consistent
with consolidation."

claim = left    L: 1  R: 7  (k=8)
dominant side = right
claim-side support = 1/8 = 0.12

FAIL: R1_LATERALITY
```

Stage 5a: Judge

confirm & diagnose

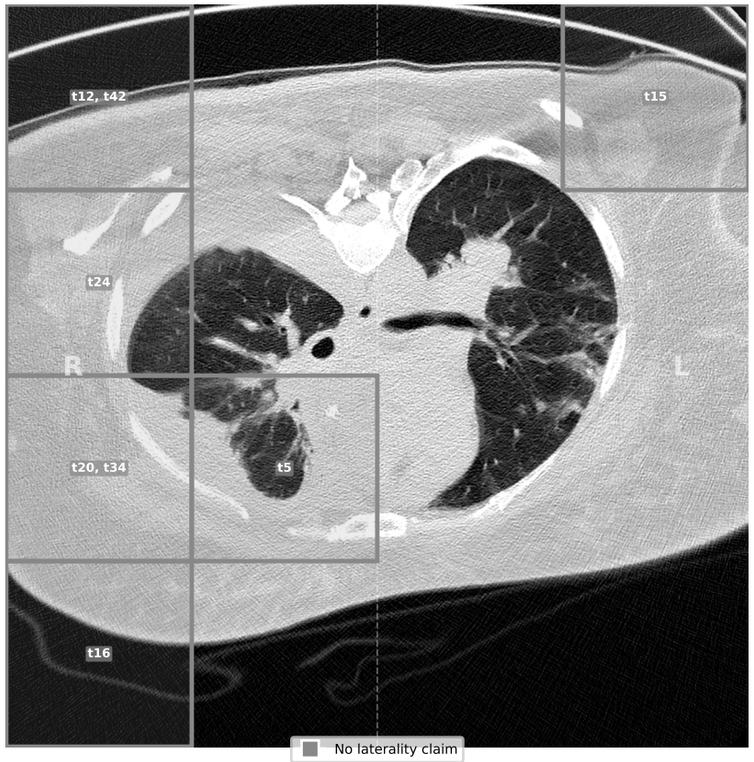


```
confirmed = true
offending_span = "left lung"
suggested_action = drop_laterality

reason:
  Laterality mismatch with claim=left,
but evidence suggests right is
dominant side.
```

Stage 5b: Repair

execute action



```
"The lung superior and lingular segments
show areas of increased density in the
superior lobe of the lower lobe with
indistinct borders, in the appearance of a
tree with buds in places, consistent with
consolidation."

change: dropped "left lung"

PASS (no unsupported laterality)
```
